

Short CV (Dr David Cram)

My research career spanning over 25 years has mainly focussed on IVF and reproductive genetics. I have presented my research findings at over 50 national and international conferences, supervised 15 PhD students to completion and have been the author of over 110 original research papers. Currently, I am Head of Genetics at Berry Genomics in Beijing and responsible for research and development of new next generation sequencing based technologies for PGD, prenatal diagnosis and cancer diagnostics.
