

Don has been working in molecular diagnostics for over 25 years and specifically in PGD applications for the last 19 years.

He joined Sydney IVF (now called Genea) in 1998 and established the embryo gene testing program.

In 2009 he introduced microarray analysis for aneuploidy testing and in 2011/12 initiated NGS applications.

Very much a hands on person, Don performed both the embryo biopsy and genetic analyses for PGD applications and has taught both for the PGDIS workshop and in other venues since 2008.
