

Xavier Vendrell is a PhD expert on Reproductive Genetics. He is the head of Reproductive Genetics Unit of the Genetics Company Sistemas Genómicos in Valencia, Spain. He graduated in Biology in 1994 and received his PhD from Valencia University in 1998 in the field of reproductive genetics. Nowadays, his team is developing several genetic approaches for ART practice. Particularly, PGD/PGS applications and genetic studies on infertile couples and gametes donors. Many of the molecular PGDs developed and have been done by the first time in Spain. He has published more than 40 indexed papers related with assisted reproduction and genetics. He is a member of several national and international scientific societies in these matters and active researcher in the field.
